INDEX TO AUTHORS

A

Adams, Mark H., Reeves, Richard E., and **Goebel, Walther F.** The synthesis of 2,4-dimethyl-β-methylglucoside, 653

Adams, Mildred, and **Hudson, C. S.** Factors influencing the use of bentonite in the purification of invertase, iii

Aird, Robert B. See *Greenberg, Aird, Boelter, Campbell, Cohn, and Murayama,* xlviii

Allen, Della. See *Collier and Allen,* 675

Alling, David W. See *Morgareidge, Alling, and Ellison,* xciii

Alvarez-Tostado, C. See *Luck, Nimmo, and Alvarez-Tostado,* lxxxi

Anderson, Ernest, Gillette, Leslie A., and **Seeley, Millard G.** The mucilage from Indian wheat, *Plantago fastigiata,* 569

—, **Kesselman, Joseph,** and **Bennett, Emil C.** Polyuronide hemicelluloses isolated from sap-wood and compression wood of white pine, *Pinus strobus,* L., 563

Anderson, R. J. See *Peck and Anderson,* 89

Anderson, Thomas F., and **Stanley, W. M.** A study by means of the electron microscope of the reaction between tobacco mosaic virus and its antiserum, iii

Andrews, James C., and **Cornatzer, W. E.** The use of ficin as an anthelmintic, iv

Armstrong, W. D. Determination of fluorine in biological materials, v

Artom, Camillo. Phospholipid metabolism in normal and denervated muscle, vi

Axelrod, A. E., and **Elvehjem, C. A.** The effect of a riboflavin deficiency upon the xanthine oxidase activity of rat liver, vi

— and —. The xanthine oxidase content of rat liver in riboflavin deficiency, 725

—, **Swingle, Karl F.,** and **Elvehjem, C. A.** The stimulatory effect of calcium upon the succinoxidase activity of fresh rat tissues, 931

B

Baer, Erich, and **Fischer, Hermann O. L.** Studies on acetone-glyceraldehyde, and optically active glycerides. IX. Configuration of the natural batyl, chimyl, and selachyl alcohols, 397

Baernstein, Harry D., and **Grand, J. A.** The effect of lead acetate on oxygen uptake of rat liver slices, 285, vii

—, —, and **Neal, P. A.** The effect of protein intake on lead poisoning, viii

Ball, Eric G., Tucker, Helen F., Solomon, A. K., and **Vennesland, Birgit.** The source of the bicarbonate of pancreatic juice, viii

—, —, —, and —. The source of pancreatic juice bicarbonate, 119

Balls, A. K., Gottschall, G. Y., and **Kies, M. W.** Autolysis in meat, ix

Barbour, Paul H., Jr. Determination of serum albumin by the falling drop method for specific gravity, x

Barnes, Richard H., Miller, Elmer S., and **Burr, George O.** The absorption and transport of fatty acids across the intestinal mucosa, 233

—, —, and —. The adrenals and fat absorption, 241

—, —, and —. Fat absorption in essential fatty acid deficiency, 773

—, —, and —. The influence of the adrenals on the transport of fat into the liver, 247

—, —, **Rusoff, I. I., Loeb, Harold G.,** and **Burr, George O.** The far ultraviolet spectral absorption of liver lipids, x

Barron, E. S. Guzman, Lyman, Carl M., Lipton, M. A., and **Goldinger, James.** The functions of diphosphothiamine, xi

Basinski, Daniel H. See *Sealock, Perkinson, and Basinski,* 153

Bates, Robert W., and **Riddle, Oscar.** Annual variation in the crop sac response to prolactin, cxliii

Baumann, C. A., and **Foster, E. G.** The effect of dibenzanthracene on vitamin A in rat tissues, xii

Baumann, Emil J., Sprinson, David B., and **Marine, David.** Bromine and the thyroid, xii

Beach, George, and **Koch, F. C.** A quantitative investigation of the changes in the gonadotropic activity of the hypophyses of rats treated in various ways, xiii

Bear, Richard S., and **Cori, Carl F.** X-ray diffraction studies of synthetic polysaccharides, 111

Beard, Dorothy. See *Neurath, Cooper, Sharp, Taylor, Beard, and Beard,* 293

Beard, Howard H. The effect of ingestion of various substances upon human endurance, cxliv

— and **Coutolenc, Raymond.** The effect of parenteral injection of supracorsin with and without vitamins upon the appearance and growth of the Walker sarcoma in rats, xiii

—. See *Pizzolato and Beard,* cii

Beard, J. W. See *Neurath, Cooper, Sharp, Taylor, Beard, and Beard,* 293

Behrens, Otto K. See *Miller, Behrens, and du Vigneaud,* 411

Bennett, Emil C. See *Anderson, Kesselman, and Bennett,* 563

Bergström, Sune. See *Wintersteiner and Bergström,* cxli

Bernheim, Frederick. The oxidation of 2-hydroxynicotinic acid by liver, xiv

— and **Bernheim, Mary L. C.** Note on the oxidation of various sugars by brain tissue, 441

Bernheim, Mary L. C. See *Bernheim and Bernheim,* 441

Bill, A. H. See *Mull, Bill, and Skowronska,* xcv

Black, S. See *Elvehjem, Henderson, Black, and Nielsen,* xxxvi

Blanchard, Kenneth C. The isolation of *p*-aminobenzoic acid from yeast, 919

Block, Walter D., and **Buchanan, Oliver H.** The fate of gold injected into white rats, xiv

Bloor, W. R. See *Hodge, MacLachlan, Bloor, Stoneburg, Oleson, and Whitehead,* lxii

Blumberg, Harold, and **Grady, Hugh G.** The production of diffuse nodular cirrhosis of the liver in rats on high fat-low protein diets, xv

Bock, Joseph C. A micromethod for the determination of urea nitrogen, xv, 519

Bodansky, Meyer, and **Duff, Virginia B.** Metabolism of glycocyamine in the nephrectomized rat, xvi

—, —, and **McKinney, Margaret G.** The formation of creatine from glycocyamine in the liver. Experiments with nephrectomized rats. Intestinal excretion and bacterial decomposition of creatine and creatinine, 365

Boelter, Muriel D. D. See *Greenberg, Aird, Boelter, Campbell, Cohn, and Murayama,* xlviii

Bohonos, N. See *Hutchings, Bohonos, Hegsted, Elvehjem, and Peterson,* 681

Bollman, J. L. See *Flock and Bollman,* xl

Booher, Lela E., and **Porter, Mildred B.** Vitamin A storage in adults, xvi

Borek, Ernest, and **Waelsch, Heinrich.** Metabolism of methionine by tissue slices, xvii

Borsook, Henry, and **Dubnoff, Jacob W.** The conversion of citrulline to arginine, xviii

Bowman, Donald E. Factors which intensify the reducing action of *l*-tyrosine, xviii

—. See *Free, Bowman, Davies, and Myers,* xlii

Boyd, M. J., Kersten, H., and **Tytell, Alfred A.** Effect of soft x-rays on crystalline proteins and enzymes, xix

Boyd, William C. The heat of serological reactions, xix

Boyer, Paul D., Evans, R. J., and **Phillips, Paul H.** The toxicity of 3-fluorotyrosine, 3-fluorophenylalanine, 3-fluoro-5-iodotyrosine, and 3,5-difluorotyrosine and their effect upon the basal metabolic rate of the rat, xx

Brand, Florence C. See *Sperry and Brand,* cxxi

Briggs, G. M. See *Hegsted, Briggs, Elvehjem, and Hart,* 191

Briggs, H. M. See *Heller, Wall, and Briggs,* lvii

Brodie, Bernard B., Friedman, Max M., and **Ferraro, Louis R.** Studies on extracellular fluid, xxi

Brown, George Bosworth, and **du Vigneaud, Vincent.** The stereoisomeric forms of lanthionine, 767

Buchanan, John M. See *Solomon, Vennesland, Klemperer, Buchanan, and Hastings,* 171

Buchanan, Oliver H. See *Block and Buchanan,* xiv

Bucklin, Bethana. See *Morse, Schlutz, Cassels, Bucklin, and Miller,* xciv

Bueding, Ernest, Stein, Martin H., and **Wortis, Herman.** Blood pyruvate curves following glucose ingestion in normal and thiamine-deficient subjects, 697

Buel, Florence. See *Deuel and Hallman,* 545

Bulger, Harold A., and **Johns, Helen E.** The determination of plasma uric acid, 427

Burk, Dean, Winzler, Richard J., and **du Vigneaud, Vincent.** The rôle of biotin in fermentation and the Pasteur effect, xxi

Burr, George O. See *Barnes, Miller, and Burr,* 233, 241, 247, 773

—. See *Barnes, Miller, Rusoff, Loeb, and Burr,* x

—. See *Loeb and Burr,* lxxx

Butts, Joseph S., and **Sinnhuber, Russell O.** Studies in amino acid metabolism. VII. The metabolism of *l*(+)-arginine and *dl*-lysine in the normal rat, 597

—, —, and **Dunn, Max S.** The metabolism of *l*(−)-tyrosine, xxii

C

Calvin, Dea B. See *Hendrix, Calvin, and Walker,* lviii

Campbell, W. Wesley. See *Greenberg, Aird, Boelter, Campbell, Cohn, and Murayama,* xlviii

Carothers, Nellie Lou. See *Deatherage, Carothers, and Spooner,* xxxii

Carpenter, Thorne M., and **Trimble, Harry C.** Respiratory quotient of the Dalmatian dog, xxiii

Cary, C. A. See *Hartman, Dryden, and Cary,* liv

Cassels, Donald E. See *Morse, Schlutz, Cassels, Bucklin, and Miller,* xciv

Chaffee, Eleanor. See *Meyer and Chaffee,* xci

Chaikoff, I. L. See *Morton, Perlman, and Chaikoff,* 603

Chance, Britton. The kinetics of the enzyme-substrate compounds of peroxidase and dihydroxymaleic acid oxidase, xxiv

Chandler, Joseph P. See *du Vigneaud, Cohn, Chandler, Schenck, and Simmonds,* 625

Chanutin, Alfred, Ludewig, Stephan, and **Masket, A. V.** Studies in the calcium-protein relationship with the aid of the ultracentrifuge, xxv

Chargaff, Erwin, and **Ziff, Morris.** Note on the isolation of serine from beef brain phosphatides, 927

—, —, and **Moore, Dan H.** The effect of anticoagulants on the electrophoretic behavior of human plasma proteins, xxv

—. See *Cohen and Chargaff,* 689

Chesley, Leon C. The determination of thiocyanate in biological fluids, 135

Chinard, Francis P. See *Hellerman, Deitz, and Chinard,* lvii

Chow, B. F., van Dyke, H. B., Greep, R. O., Rothen, A., and **Shedlovsky, T.** Biochemical aspects of metakentrin (interstitial cell-stimulating hormone), xxvi

Christensen, William R. See *Logan, Christensen, and Kirklin,* lxxx

Christopher, G. L. See *Crossley, Kienle, Vassel, and Christopher,* xxxi

Ciereszko, Leon S., and **White, Abraham.** Observations on the purification of anterior pituitary hormones, xxvii

—. See *White and Ciereszko,* cxxxix

Coffman, J. R. Studies on colored esters of hydroxysteroids, xxviii

Cohen, Philip P., and **Hekhuis, G. Leverne.** Rate of transamination in normal tissues, 711

— and —. Transamination in normal and tumor tissue, xxviii

Cohen, Seymour S. The phospholipids in the thromboplastic protein from lungs, xxix

— and **Chargaff, Erwin.** The electrophoretic properties of the thromboplastic protein from lungs, 689

Cohn, Mildred. See *du Vigneaud, Cohn, Chandler, Schenck, and Simmonds,* 625

Cohn, Waldo E. See *Greenberg, Aird, Boelter, Campbell, Cohn, and Murayama,* xlviii

Cole, Versa V. See *Harned and Cole,* liii

Collier, H. Bruce, and **Allen, Della.** Inhibition of succinic dehydrogenase by phenothiazone, 675

Colowick, Sidney P., and **Kalckar, Herman M.** Preparation of a heat-stable protein which activates hexokinase, xxix

Colowick, Sidney P. See *Sutherland, Colowick, and Cori,* 309
Coolidge, Thomas B. Poising of plasma, xxx
Cooper, Gerald R. See *Neurath, Cooper, and Erickson,* xcvi
—. See *Neurath, Cooper, Sharp, Taylor, Beard, and Beard,* 293
Cori, Carl F. See *Bear and Cori,* 111
—. See *Sutherland, Colowick, and Cori,* 309
Cornatzer, W. E. See *Andrews and Cornatzer,* iv
Coutolenc, Raymond. See *Beard and Coutolenc,* xiii
Cox, R. P. See *Quackenbush, Cox, and Steenbock,* civ
Cox, William W., and **Wendel, William B.** The normal rate of reversion of methemoglobin to hemoglobin, xxxi
Crandall, Lathan A., Jr. See *Winter and Crandall,* 97
Crossley, M. L., Kienle, R. H., Vassel, Bruno, and **Christopher, G. L.** The chemistry of infectious diseases. III. Polarographic studies of the effect of denaturing agents and enzymes on blood sera of normal and pneumococcus-infected dogs, xxxi

D

Daft, Floyd Shelton. See *Lillie, Daft, and Sebrell,* cxlvi
Dakin, H. D. The formation of betaine from hydroxyamino acids on methylation, 847
Dann, W. J., and **Handler, Philip.** The quantitative estimation of nicotinic acid in animal tissues, 201
— and —. Synthesis of nicotinic acid by the chick embryo, 935
—. See *Handler and Dann,* li, 739
Davies, Dean F. See *Free, Bowman, Davies, and Myers,* xlii
Day, Paul L. See *Totter and Day,* cxxxiv
Dean, R. B., and **Fishman, M. M.** Determination of chloride and base in the same tissue sample, 807
Deatherage, F. E., Carothers, Nellie Lou, and **Spooner, Jean.** The effect of dietary changes on the nitrogen retention in hyperthyroids, xxxii
Deitz, Victor R. See *Hellerman, Deitz, and Chinard,* lvii
Deuel, Harry J., Jr., and **Hallman, Lois F.** Studies on ketosis. XIX. Further studies on endogenous ketonuria in the rat, 545
—. See *Halliday and Deuel,* 555
Dorfman, Albert, Rice, Lester, and **Koser, Stewart A.** The mechanism of action of sulfapyridine, xxxiii
Dorfman, Ralph I. See *Fish and Dorfman,* 83, xl
Dounce, Alexander L. An improved method for recrystallizing urease, 307
Dow, R. B. See *Lauffer and Dow,* 509
Drabkin, David L. The penetration of organic substances into cells and their reaction with cell constituents; a spectrophotometric study, xxxiv
—. Spectrophotometric studies. VII. The establishment of precise spectrophotometric constants for cytochrome *c* and hemin derivatives, upon an iron basis, 373
—. VIII. The microdetermination of iron in cytochrome *c* and hemin preparations, 387
Dryden, L. P. See *Gomez, Hartman, Hall, and Dryden,* xlvi
—. See *Hartman, Dryden, and Cary,* liv
Dubnoff, Jacob W. See *Borsook and Dubnoff,* xviii

DuBois, K. P. See *Potter and DuBois*, cii
Dubos, René J. See *Hotchkiss and Dubos*, lxiii
Duff, Virginia B. See *Bodansky and Duff*, xvi
—. See *Bodansky, Duff, and McKinney*, 365
Dunn, Max S. See *Butts, Sinnhuber, and Dunn*, xxii
van Dyke, H. B. See *Chow, van Dyke, Greep, Rothen, and Shedlovsky*, xxvi

E

Eakin, Robert E., Snell, Esmond E., and **Williams, Roger J.** The concentration and assay of avidin, the injury-producing protein in raw egg white, 535
Earle, Ann. See *Strong, Earle, and Zeman*, cxxviii
Eckstein, H. C. See *Singal and Eckstein*, 27
—. See *Treadwell and Eckstein*, 35
Eichelberger, Lillian. The distribution of body water and electrolytes in skeletal muscle in dogs with impaired renal function following injection of potassium salts, xxxv
—. The distribution of body water and electrolytes in skeletal muscle of dogs with experimental hydronephrosis following injections of potassium salts, 467
Eisenman, A. J., Smith, P. K., Winkler, A. W., and **Elkinton, J. R.** The transfer of ions across the stomach wall, studied by means of radioactive isotopes, xxxv
Elkinton, J. R. See *Eisenman, Smith, Winkler, and Elkinton*, xxxv
Ellison, Malcolm. See *Morgareidge, Alling, and Ellison*, xciii
Elvehjem, C. A., Henderson, L. M., Black, S., and **Nielsen, E.** Synthetic calcium pantothenate in the nutrition of the rat, xxxvi
—. See *Axelrod and Elvehjem*, vi, 725
—. See *Axelrod, Swingle, and Elvehjem*, 931
—. See *Hegsted, Briggs, Elvehjem, and Hart*, 191
—. See *Hutchings, Bohonos, Hegsted, Elvehjem, and Peterson*, 681
Embree, Norris Dean, and **Shantz, Edgar M.** A possible new member of the vitamins A_1 and A_2 group, xxxvii
Engel, R. W. Effect of calcium pantothenate and other vitamin B factors on liver fat, xxxvii
Erickson, John O. See *Neurath, Cooper, and Erickson*, xcvi
Evans, Herbert M. See *Li, Lyons, and Evans*, 43
Evans, John S., and **Varney, Roger F.** A mouse uterine weight method for estrogen assays, xxxviii
Evans, R. J. See *Boyer, Evans, and Phillips*, xx

F

Fahey, Kathleen R. See *Green, Fahey, and Green*, xlvii
Feeney, R. E., and **Strong, F. M.** Identification of growth-stimulating substances for *Lactobacillus casei* ε, xxxviii
Felberg, Robert S. See *Hollander and Felberg*, lxii
Ferraro, Louis R. See *Brodie, Friedman, and Ferraro*, xxi
Ferry, John D. Extraction of proteins from various jellyfishes, xxxix
Field, Henry, Jr. See *Melnick and Field*, xc
Fieser, Louis F. See *Hershberg, Wolfe, and Fieser*, 215

Fischer, Hermann O. L. See *Baer and Fischer,* 397
Fish, William R., and **Dorfman, Ralph I.** The metabolism of α-estradiol and estrone, xl
— and —. Metabolism of the steroid hormones. I. The conversion of α-estradiol to estrone by the guinea pig, 83
Fishman, M. M. See *Dean and Fishman,* 807
Fiske, Cyrus H. See *Hitchings and Fiske,* 491
Flock, E. V., and **Bollman, J. L.** The effect of stilbestrol on the plasma phospholipids of the cock, xl
Floyd, N. F. See *Medes and Floyd,* lxxxviii
Fontaine, F. E. See *Johnson, Koepsell, and Fontaine,* lxvi
Forbes, J. C., Leach, B. E., and **Outhouse, E. L.** Studies on fat metabolism and susceptibility to carbon tetrachloride, xli
Ford, Zenas, Jr. See *Sure and Ford,* cxxx
Forney, R. B. See *Harger, Hulpieu, Gatch, and Forney,* lii
Foster, E. G. See *Baumann and Foster,* xii
Foster, William C. See *McClendon and Foster,* lxxxv
Free, Alfred H., Bowman, Donald E., Davies, Dean F., and **Myers, Victor C.** The effect of sulfanilamide on the acid-base equilibrium of the dog, xlii
Freytag, Ruth M. See *Morgan, Hendricks, and Freytag,* xcii
Friedenwald, J. S., and **Herrmann, H.** The distribution of certain oxidative enzymes in the ciliary body and chorioid plexus, xliii
Friedman, Max M. See *Brodie, Friedman, and Ferraro,* xxi
Fromageot, Claude. See *Laskowski and Fromageot,* 663

G

Gaebler, Oliver Henry, and **Robinson, Abner R.** Studies on the mechanism by which anterior pituitary preparations produce nitrogen storage, xliv
Galbraith, Harry. See *Williams, Kaucher, Galbraith, Segaloff, and Nelson,* cxl
Gallagher, T. F. See *Potts and Gallagher,* ciii
Gassner, F. X. See *Gustavson, Koenig, and Gassner,* xlix
Gatch, W. D. See *Harger, Hulpieu, Gatch, and Forney,* lii
Gavin, Gertrude. See *McHenry and Gavin,* lxxxvii
Geiger, Walton B., Patterson, W. I., and **Harris, Milton.** The rôle of cystine in the structure of the fibrous protein, wool, xliv
Gillette, Leslie A. See *Anderson, Gillette, and Seeley,* 569
Gilson, Lewis E. Fractionation of protein hydrolysates by organic solvents, xlv
Goebel, Walther F. See *Adams, Reeves, and Goebel,* 653
Goepfert, George J. Studies in the mechanism of dehydrogenation by *Fusarium lini* Bolley. XIX. Dehydrogenation of higher primary and secondary alcohols, 525
Goldberg, Melvin. See *Sullivan and Goldberg,* cxxix
Goldinger, James. See *Barron, Lyman, Lipton, and Goldinger,* xi
Gomez, E. T., Hartman, A. M., Hall, S. R., and **Dryden, L. P.** Effect of oral administration of oat juice extract upon the reproductive organs of immature rats, xlvi
Gottschall, G. Y. See *Balls, Gottschall, and Kies,* ix
Grady, Hugh G. See *Blumberg and Grady,* xv

Grand, J. A. See *Baernstein and Grand,* 285, vii
—. See *Baernstein, Grand, and Neal,* viii
Grayman, Isabelle. See *Nelson, Grayman, and Mirsky,* 361
Green, Arda Alden, Fahey, Kathleen R., and **Green, Sue Y.** The carbohydrate and phosphorus content of serum proteins, xlvii
Green, D. E., and **Stumpf, P. K.** Starch phosphorylase, xlvii
—, **Westerfeld, W. W., Vennesland, Birgit,** and **Knox, W. E.** Pyruvic and α-ketoglutaric carboxylases of animal tissues, 683
Green, Mary H. See *Schmidt and Green,* cxi
Green, Sue Y. See *Green, Fahey, and Green,* xlvii
Greenberg, David M., Aird, Robert B., Boelter, Muriel D. D., Campbell, W. Wesley, Cohn, Waldo E., and **Murayama, Makio M.** Tracer studies with induced radioactive isotopes of the permeability of the blood-cerebrospinal fluid barrier to ions, xlviii
Greenstein, Jesse P., and **Jenrette, Wendell V.** The interaction of thymonucleic acid with proteins, salts, and tissue extracts, xlix
Greep, R. O. See *Chow, van Dyke, Greep, Rothen, and Shedlovsky,* xxvi
Gustavson, R. G., Koenig, Virgil L., and **Gassner, F. X.** The effect of stilbestrol and estrone on the thyroid gland of the rat, xlix
György, Paul. See *du Vigneaud, Hofmann, Melville, and György,* 643

H

Haagen-Smit, A. J. See *Tatum and Haagen-Smit,* 575
Hall, James L. Moving boundary electrophoretic study of insulin. A correction, 671
Hall, S. R. See *Gomez, Hartman, Hall, and Dryden,* xlvi
Halliday, Nellie, and **Deuel, Harry J., Jr.** The presence of free and combined thiamine in milk, 555
Hallman, Lois F. See *Deuel and Hallman,* 545
Hallstone, Victor E. See *Deuel and Hallman,* 545
Hamilton, Tom R., and **Wasson, Bette.** Studies of sulfathiazole effect on the growth rate of selected strains of streptococci in human blood, p. 1
Handler, Philip, and **Dann, W. J.** The nicotinic acid and coenzyme content of animal tissues, 739
— and —. The quantitative estimation of nicotinic acid in animal tissues, li
—. See *Dann and Handler,* 201, 935
Hanke, Martin E., and **Kahn, Herbert.** The serum proteins in cancer, cxlv
Harger, R. N., Hulpieu, H. R., Gatch, W. D., and **Forney, R. B.** A study of the anesthetic concentration of ether vapor for man, with use of the Cady gas balance, lii
Harned, Ben K., and **Cole, Versa V.** Factors influencing the conjugation of sulfapyridine. I. Quinine and atabrine, liii
Harris, John E. Glycolysis of the red cell and its potassium content, liii
Harris, Milton. See *Geiger, Patterson, and Harris,* xliv
Hart, E. B. See *Hegsted, Briggs, Elvehjem, and Hart,* 191
—. See *McKibbin, Schaefer, and Hart,* lxxxvii

Harte, R. A. See *Landsteiner and Harte,* 673

Hartman, A. M., Dryden, L. P., and **Cary, C. A.** Deficiencies other than vitamin A in vitamin A-free diets, liv

—. See *Gomez, Hartman, Hall, and Dryden,* xlvi

Hastings, A. Baird. See *Solomon, Vennesland, Klemperer, Buchanan, and Hastings,* 171

—. See *Vennesland, Solomon, Klemperer, and Hastings,* cxxxv

Haurowitz, Felix, Schwerin, Paula, and **Yenson, M. Mutahhar.** Destruction of hemin and hemoglobin by the action of unsaturated fatty acids and oxygen, 353

Haven, Frances L., and **Levy, Sylvia Ruth.** The rate of turnover of the sphingomyelin of rat Carcinosarcoma 256 as measured by radioactive phosphorus, cxlv

Hays, Edwin E., and **Last, Jules H.** The action of liver extract on the size of erythrocytes of the opossum embryo, lv

Heard, R. D. H., and **Hoffman, M. M.** The conversion of estradiol to estrone in man, lv

—and **McKay, A. F.** Observations on the constitution of androstanol-3(β)-one from equine pregnancy urine, and the synthesis of androstanol-3(β)-one-7, lvi

Hegsted, D. Mark, Briggs, G. M., Elvehjem, C. A., and **Hart, E. B.** The rôle of arginine and glycine in chick nutrition, 191

—. See *Hutchings, Bohonos, Hegsted, Elvehjem, and Peterson,* 681

Heidelberger, Michael. See *Schoenheimer, Heidelberger, Rittenberg, and Ratner,* cxii

Hekhuis, G. Leverne. See *Cohen and Hekhuis,* xxviii, 711

Heller, V. G., Wall, Robert, and **Briggs, H. M.** The utilization of feed as affected by grinding, lvii

Hellerman, Leslie, Deitz, Victor R., and **Chinard, Francis P.** Protein sulfhydryl groups and the reversible inactivation of the enzyme urease, lvii

Henderson, L. M. See *Elvehjem, Henderson, Black, and Nielsen,* xxxvi

Hendricks, Jeannette B. See *Morgan, Hendricks, and Freytag,* xcii

Hendrix, Byron M., Calvin, Dea B., and **Walker, James N.** The precipitating action of alcohol and of acetone on egg albumin, lviii

Henny, George C. See *Spiegel-Adolf and Henny,* cxxii, cxxiii

Herbst, Robert M., and **Shemin, David.** The synthesis of peptides by transamination, lix

Herrmann, H. See *Friedenwald and Herrmann,* xliii

Hershberg, E. B., Wolfe, John K., and **Fieser, Louis F.** Polarographic determination of dehydroisoandrosterone and other 3-hydroxy-Δ^5-steroids, 215

Hess, W. C., and **Sullivan, M. X.** Further studies of cystinuria in man, lx

Higgins, Charles C. See *McCullagh, Throckmorton, and Higgins,* lxxxvi

Hill, Elsie, and **Koehler, Alfred E.** The gain of tolerance during galactose and maltose injection, lxi

—. See *Koehler, Windsor, and Hill,* 811

Hirschmann, H. Preparation of pregnanetriol-3(α),17,20, 797
Hitchings, George H., and **Fiske, Cyrus H.** The determination of the purines, 491
— and **Wearn, Joseph T.** Electrolyte changes in hypertrophying rabbit heart, lxi
Hodge, Harold Carpenter, MacLachlan, P. L., Bloor, W. R., Stoneburg, Charles A., Oleson, Margaret C., and **Whitehead, Raymond.** Lipids of the fasting mouse, lxii
—. See *Steadman, Hodge, and Horn,* 71
Hoffman, M. M. See *Heard and Hoffman,* lv
Hofmann, Klaus. See *du Vigneaud, Hofmann, Melville, and György,* 643
—. See *du Vigneaud, Hofmann, Melville, and Rachele,* 763
Hogan, Albert G. See *Richardson and Hogan,* cvi
Hogden, Corinne G. See *Robinson and Hogden,* cvii, 853
Hollander, Franklin, and **Felberg, Robert S.** Gastric mucus secretion, lxii
Holt, L. Emmett. See *Najjar and Holt,* xcvi
Horn, Helen Wilson. See *Steadman, Hodge, and Horn,* 71
Horvath, S. M., and **Knehr, C. A.** Adaptation of the Folin-Malmros micro blood sugar method to the photoelectric colorimeter, 869
Horwitt, M. K., and **Simon, Frieda Panimon.** Hexylresorcinol as an inhibitor of catalyzed reactions, lxiii
Hotchkiss, Rollin D., and **Dubos, René J.** Bactericidal fractions from an aerobic sporulating bacillus, lxiii
Hubbell, Rebecca B. See *Vickery, Smith, Hubbell, and Nolan,* 613
Hudson, C. S. See *Adams and Hudson,* iii
Huff, Jesse W. See *Perlzweig, Sarett, and Huff,* c
Hughes, Hettie B. Bile acid metabolism. The fate of cholic acid in the guinea pig, lxiv
—. A gravimetric method for the determination of carbonyl groups in ketosteroids, 21
Hulpieu, H. R. See *Harger, Hulpieu, Gatch, and Forney,* lii
Hutchings, B. L., Bohonos, N., Hegsted, D. Mark, Elvehjem, C. A. and **Peterson, W. H.** Relation of a growth factor required by *Lactobacillus casei* ϵ to the nutrition of the chick, 681
Hutchinson, M. C., and **Stotz, Elmer.** Observations on inhibition of brain respiration and narcosis, lxv
—. See *Stotz and Hutchinson,* cxxvii

J

Jenrette, Wendell V. See *Greenstein and Jenrette,* xlix
Jensen, O. G. See *Noll and Jensen,* 755
Johns, Helen E. See *Bulger and Johns,* 427
Johnson, Marvin J., Koepsell, H. J., and **Fontaine, F. E.** Influence of substrate on formation of abnormal products in the lactic fermentation, lxvi
Jorgensen, Myron N. See *Levine and Jorgensen,* lxxvii

K

Kahn, Herbert. See *Hanke and Kahn,* cxlv
Kalckar, Herman M. See *Colowick and Kalckar,* xxix
Karush, Fred. Some properties of peroxidase action at high enzyme concentration, lxvi

Kaucher, Mildred. See *Williams, Kaucher, Galbraith, Segaloff, and Nelson,* cxl

INDEX TO SUBJECTS

A

Acetic acid: Acetoacetic acid hydrolysis, chemical and biochemical systems, *Lehninger*, lxxvi
Iodo-, poisoning, phospholipids, *Sinclair*, cxvi
Acetoacetic acid: *Koehler, Windsor, and Hill*, 811
Acetic acid, hydrolysis, chemical and biochemical systems, *Lehninger*, lxxvi
Metabolism, *Windsor and Koehler*, cxli
Acetone: *Koehler, Windsor, and Hill*, 811
Egg albumin precipitation, action, *Hendrix, Calvin, and Walker*, lviii
Acetone body: Utilization, *Nelson, Grayman, and Mirsky*, 361
Acetone-glyceraldehyde: *Baer and Fischer*, 397
Acetylcholine: Gastric ulcer production, effect, *Tashiro*, cxxxi
Acid-base equilibrium: Sulfanilamide effect, *Free, Bowman, Davies, and Myers*, xlii
Acrodynia: Pantothenic acid, pyridoxine, and linoleic acid, effect, *Salmon*, cix
Acyl phosphate(s): *Lipmann*, lxxix
Adenosine triphosphate: Brain, *Kerr*, 77
Adolescent(s): Exercise capacity, *Morse, Schlutz, Cassels, Bucklin, and Miller*, xciv
Adrenal(s): Cortex, blood serum protein metabolism, effect, *Levin and Leathem*, lxxvi
Adrenal(s)—*continued:*
Fat absorption and, *Barnes, Miller, and Burr*, 241
Ketone, α,β-unsaturated, isolation, *Pfiffner and North*, 161
Liver fat transport, effect, *Barnes, Miller, and Burr*, 247
Adrenalectomy: Kidney glyconeogenesis, effect, *Russell and Wilhelmi*, 747
Albumin: Blood serum, determination, specific gravity falling drop method, *Barbour*, x
Egg. *See* Egg albumin
Alcohol(s): Egg albumin precipitation, action, *Hendrix, Calvin, and Walker*, lviii
Primary and secondary, dehydrogenation, *Fusarium lini, Goepfert*, 525
See also Batyl alcohol, Chimyl alcohol, Selachyl alcohol
Amine(s): Aliphatic, configurational relationships, *Levene and Kuna*, 259
Amino acid(s): Aromatic, cucumber virus, *Knight and Stanley*, lxx
—, tobacco mosaic virus, *Knight and Stanley*, lxx
Bacteriophage, *Spizizen*, cxxiv
Cucurbit seed globulins, *Vickery, Smith, Hubbell, and Nolan*, 613
d-, biological material, determination, *Sealock and Scherp*, cxiv
Hydroxy-, O-acetyl derivatives, preparation, *Toennies, Sakami, and Kolb*, cxxxiii
Hydroxy groups, determination, *Toennies, Sakami, and Kolb*, cxxxiii

Amino acid(s)—*continued:*
Hydroxy-, methylation, betaine formation, *Dakin*, 847
Metabolism, *Butts and Sinnhuber*, 597
Sulfur-containing, lipotropic action, *Singal and Eckstein*, 27
Aminobenzoic acid: *p*-, yeast, isolation, *Blanchard*, 919
Androstanol-3(β)-one: Urine, pregnancy, chemical constitution, *Heard and McKay*, lvi
Androstanol-3(β)-one-7: Synthesis, *Heard and McKay*, lvi
Androsterone: Dehydroiso-, determination, polarographic, *Hershberg, Wolfe, and Fieser*, 215
Anemia: Fish, factor, *Simmons and Norris*, 679
Hemorrhagic, *McKibbin, Schaefer, and Hart*, lxxxvii
Anesthesia: Ether, concentration, *Harger, Hulpieu, Gatch, and Forney*, lii
Anhydrase: Carbonic, *Main and Locke*, 909
—, activity, *Main and Locke*, 909
—, chemistry, *Scott and Mendive*, 445
—, histamine effect, *Main and Locke*, lxxxi
Anthelmintic: Ficin, *Andrews and Cornatzer*, iv
Antibody: Blood, regeneration, molecular, *Schoenheimer, Heidelberger, Rittenberg, and Ratner*, cxii
Anticoagulant(s): Blood plasma proteins, electrophoresis, effect, *Chargaff, Ziff, and Moore*, xxv
Apparatus: Quartz fiber balance, *Lowry*, 183
Arginine: Blood plasma and cells, *Weber*, cxxxvii
Citrulline conversion, *Borsook and Dubnoff*, xviii
l(+)-, metabolism, *Butts and Sinnhuber*, 597
Arginine—*continued:*
Nutrition, chick, rôle, *Hegsted, Briggs, Elvehjem, and Hart*, 191
Ascorbic acid: Methemoglobin reduction, *Vestling*, cxxxv
Phenylalanine metabolism, rôle, *Sealock, Perkinson, and Basinski*, 153
Silicomolybdic acid reduction, *Levine and Rosler*, lxxviii
Tyrosine metabolism, rôle, *Sealock, Perkinson, and Basinski*, 153
Asparthione: Synthesis, *Miller, Behrens, and du Vigneaud*, 411
Aspartic acid: Analogue, glutathione, synthesis, *Miller, Behrens, and du Vigneaud*, 411
Atabrine: Sulfapyridine conjugation, effect, *Harned and Cole*, liii
Avidin: Concentration, *Eakin, Snell, and Williams*, 535
Determination, biological, *Eakin, Snell, and Williams*, 535

B

Bacillus: Aerobic, sporulating, fractions, bactericidal, *Hotchkiss and Dubos*, lxiii
Tubercle. *See* Tubercle bacillus
See also Lactobacillus casei
Bacteria: Cholic acid decomposition, *Schmidt and Green*, cxi
Drosophila v^+ hormone, identification, *Tatum and Haagen-Smit*, 575
Lactic acid, growth, manganese relation, *Woolley*, 311
Bacteriophage: Amino acids, *Spizizen*, cxxiv
Balance: Quartz fiber, *Lowry*, 183
Barbiturate(s): Vitamin C deficiency, effect, *Kueter, Richards, and Klatt*, lxxii
Basal metabolism: Dietary protein relation, *Marron and Weingart*, lxxxiii

Basal metabolism—*continued:*
Fluorinated compounds, organic, effect, *Boyer, Evans, and Phillips*, xx
Base: Determination, *Dean and Fishman*, 807
Total, blood serum, determination, conductivity and specific gravity, *Sunderman*, cxxix
Batyl alcohol: Natural, configuration, *Baer and Fischer*, 397
Bentonite: Invertase purification, use, *Adams and Hudson*, iii
Benzanthracene: Di-, tissue vitamin A, effect, *Baumann and Foster*, xii
Benzoic acid: *p*-Amino-, yeast, isolation, *Blanchard*, 919
Betaine: Formation, hydroxyamino acid methylation, relation, *Dakin*, 847
Bicarbonate: Pancreatic juice, source, *Ball, Tucker, Solomon, and Vennesland*, 119, viii
Bile acid(s): Metabolism, *Hughes*, lxiv
Schmidt and Green, cxi
Biotin: Crystalline, free, preparation, *du Vigneaud, Hofmann, Melville, and Rachele*, 763
Determination, microbiological, *Lampen, Kline, and Peterson*, lxxiv
Fermentation, rôle, *Burk, Winzler, and du Vigneaud*, xxi
Lipid synthesis, effect, *McHenry and Gavin*, lxxxvii
Liver, isolation, *du Vigneaud, Hofmann, Melville, and György*, 643
Pasteur effect, rôle, *Burk, Winzler, and du Vigneaud*, xxi
Blood: Antibody, regeneration, molecular, *Schoenheimer, Heidelberger, Rittenberg, and Ratner*, cxii
Blood—*continued:*
Calcium, thyroid and parathyroid administration effect, *Logan, Christensen, and Kirklin*, lxxx
-Cerebrospinal fluid, ion permeability, radioactive isotopes in study, *Greenberg, Aird, Boelter, Campbell, Cohn, and Murayama*, xlviii
Chlorides, Eskimo, *Levine and Jorgensen*, lxxvii
Circulating, metathrombin, *Quick*, cxlvi
Iodine, *Man, Lavietes, and Riggs*, lxxxii
Lead, calcium, phosphorus, and vitamin D effect, *Sobel, Yuska, and Kramer*, cxx
Pantothenic acid, Mammalia, *Pearson*, 423
Phosphate, inorganic, thyroid and parathyroid administration effect, *Logan, Christensen, and Kirklin*, lxxx
Protein, regeneration, molecular, *Schoenheimer, Heidelberger, Rittenberg, and Ratner*, cxii
Pyruvate, glucose ingestion and thiamine deficiency, effect, *Bueding, Stein, and Wortis*, 697
Quinine, determination, photelometric, *Kyker and Webb*, lxxiii
Streptococcus growth, sulfathiazole effect, *Hamilton and Wasson*, p. 1
Blood cell(s): Arginine, *Weber*, cxxxvii
Red, glycolysis and potassium content, *Harris*, liii
—, permeability, sodium and potassium, *Kurnick*, 581
—, size, opossum embryo, liver extract effect, *Hays and Last*, lv
Blood plasma: Arginine, *Weber*, cxxxvii

Blood plasma—*continued:*
Bromide and chloride, bromide administration effect, *Rossen and Reichenberg,* cvii
Diiodotyrosine turnover, thyrotropic hormone effect, radioactive iodine as indicator, *Morton, Perlman, and Chaikoff,* 603
Lipids, distribution and characterization, *Kelsey and Longenecker,* lxix
Muscle, skeletal, available fluid, and, electrolyte and water exchange, dehydration, *Mellors, Muntwyler, and Mautz,* lxxxix
Phospholipids, stilbestrol effect, *Flock and Bollman,* xl
Poising, *Coolidge,* xxx
Proteins, electrophoresis, anticoagulants, effect, *Chargaff, Ziff, and Moore,* xxv
—, total, molecular weight, *Taylor and Keys,* cxxxii
Thyroxine turnover, thyrotropic hormone effect, radioactive iodine as indicator, *Morton, Perlman, and Chaikoff,* 603
Uric acid, determination, *Bulger and Johns,* 427
Blood serum: Albumin, determination, specific gravity falling drop method, *Barbour,* x
Base, total, determination, conductivity and specific gravity, *Sunderman,* cxxix
Calcium, diffusible, *Todd,* cxxxiii
—, —, hypoparathyroidism, parathormone, dihydrotachysterol, and vitamin D administration, *Todd,* cxxxiii
Magnesium, magnesium-deficient diet and fasting, effect, *Snyder and Tweedy,* cxx
Phosphatase, magnesium-deficient diet and fasting, effect, *Snyder and Tweedy,* cxx
Blood serum—*continued:*
Pneumococcus-infected dogs, denaturing agents and enzymes, effect, *Crossley, Kienle, Vassel, and Christopher,* xxxi
Potassium, diabetes, juveniles, *Smelo and Shinn,* cxvii
Protein, determination, gravimetric, *Robinson and Hogden,* cvii
—, liver disease, determination, *Kingsley,* lxix
—, metabolism, hypophysis and adrenal cortex relation, *Levin and Leathem,* lxxvi
Proteins, cancer, *Hanke and Kahn,* cxlv
—, carbohydrate and phosphorus, *Green, Fahey, and Green,* xlvii
—, denaturation and reversal, *Neurath, Cooper, and Erickson,* xcvi
—, determination, gravimetric, *Robinson and Hogden,* 853
Sodium, diabetes, juveniles, *Smelo and Shinn,* cxvii
Blood sugar: Determination, Folin-Malmros, adaptation to photoelectric colorimeter, *Horvath and Knehr,* 869
Temperature effect, glucose and starch administration, *Rafferty and MacLachlan,* 167
Bone: Lead, calcium, phosphorus, and vitamin D effect, *Sobel, Yuska, and Kramer,* cxx
Lipids, diet relation, *Newlin and McCay,* xcvii
Potassium, spectrochemistry, *Steadman, Hodge, and Horn,* 71
Brain: Adenosine triphosphate, *Kerr,* 77
Lipids, deposition, growth and myelination effect, *Waelsch, Sperry, and Stoyanoff,* 885

Brain—*continued:*
Lipids, metabolism, early life, *Waelsch and Sperry,* cxxxvii
—, —, growth and myelination effect, *Waelsch, Sperry, and Stoyanoff,* 885
—, partition, *Williams, Kaucher, Galbraith, Segaloff, and Nelson,* cxl
Oxidation, narcotics and indole, effect, *Stotz and Hutchinson,* cxxvii
Phosphatides, serine isolation, *Chargaff and Ziff,* 927
Phosphorus compounds, *Kerr,* 77
Proteins and lipids, relationships, *Kondritzer,* lxxi
Respiration inhibition and narcosis, *Hutchinson and Stotz,* lxv
Sugar oxidation, *Bernheim and Bernheim,* 441
Bromide: Blood plasma, spinal fluid, and urine, bromide administration effect, *Rossen and Reichenberg,* cvii
Bromine: Thyroid and, *Baumann, Sprinson, and Marine,* xii
Butyric acid: *dl*-α-Hydroxy-γ-benzylthio-, metabolism, *Stekol,* 827
dl-α-Hydroxy-γ-thio-, S-benzyl derivatives, metabolism, *Stekol,* cxxv

C

Calcium: Blood and bone lead, effect, *Sobel, Yuska, and Kramer,* cxx
—, thyroid and parathyroid administration effect, *Logan, Christensen, and Kirklin,* lxxx
Diffusible, blood serum, *Todd,* cxxxiii
—, — —, hypoparathyroidism, parathormone, dihydrotachysterol, and vitamin D administration, *Todd,* cxxxiii
Calcium—*continued:*
Milk, dry, solids, and vegetables, utilization, *Shields and Mitchell,* cxv
-Protein relationship, ultracentrifuge studies, *Chanutin, Ludewig, and Masket,* xxv
Tissue succinoxidase, effect, *Axelrod, Swingle, and Elvehjem,* 931
Urine, thyroid and parathyroid administration effect, *Logan, Christensen, and Kirklin,* lxxx
Vegetables and dry milk solids, utilization, *Shields and Mitchell,* cxv
Calcium pantothenate: Liver fat, effect, *Engel,* xxxvii
Synthetic, nutrition, *Elvehjem, Henderson, Black, and Nielsen,* xxxvi
Calculi: Kidney, phosphatic, solubility, *McCullagh, Throckmorton, and Higgins,* lxxxvi
Cancer: Blood serum proteins, *Hanke and Kahn,* cxlv
See also Sarcoma
Carbohydrate: Blood serum proteins, *Green, Fahey, and Green,* xlvii
Metabolism, carbon dioxide participation, *Solomon, Vennesland, Klemperer, Buchanan, and Hastings,* 171
—, vitamins B_1 and D, effect, *Pincussen,* ci
Carbohydrate group: Egg proteins, *Levene,* 279
Carbon dioxide: Body, fate, *Vennesland, Solomon, Klemperer, and Hastings,* cxxxv
Carbohydrate cycle, relation, *Solomon, Vennesland, Klemperer, Buchanan, and Hastings,* 171
Carbonic anhydrase: *Main and Locke,* 909

Carbonic anhydrase—*continued:*
Activity, *Main and Locke*, 909
Chemistry, *Scott and Mendive*, 445
Histamine, activation, *Main and Locke*, lxxxi
Carbon tetrachloride: Poisoning, fat metabolism, relation, *Forbes, Leach, and Outhouse*, xli
Carbonyl group(s): Ketosteroids, determination, gravimetric, *Hughes*, 21
Carboxylase: α-Ketoglutaric, tissue, *Green, Westerfeld, Vennesland, and Knox*, 683
Pyruvic, tissue, *Green, Westerfeld, Vennesland, and Knox*, 683
Carcinosarcoma: Sphingomyelin turnover, radioactive phosphorus in study, *Haven and Levy*, cxlv
Carotene: Absorption and retention, normal and low fat rations, *Russell, Taylor, Walker, and Polskin*, cix
β-, silk oak flowers, *Zechmeister and Polgár*, 1
Stabilization, linoleic ester, *Quackenbush, Cox, and Steenbock*, civ
Cataract: Tryptophane deficiency effect, *Totter and Day*, cxxxiv
Cell(s): Fragments, oxygen uptake, *Lazarow*, lxxv
Organic substances, penetration and reaction, *Drabkin*, xxxiv
Cerebrospinal fluid: Blood-, ion permeability, radioactive isotopes in study, *Greenberg, Aird, Boelter, Campbell, Cohn, and Murayama*, xlviii
Bromide and chloride, bromide administration effect, *Rossen and Reichenberg*, cvii
Iodine, *Man, Lavietes, and Riggs*, lxxxii
Chick: Arginine, nutrition rôle, *Hegsted, Briggs, Elvehjem, and Hart*, 191
Glycine, nutrition rôle, *Hegsted, Briggs, Elvehjem, and Hart*, 191
Nutrition, *Lactobacillus casei* growth factor, relation, *Hutchings, Bohonos, Hegsted, Elvehjem, and Peterson*, 681
Chimyl alcohol: Natural, configuration, *Baer and Fischer*, 397
Chloride(s): Biological fluids, determination, *Schales and Schales*, 879
Blood, Eskimo, *Levine and Jorgensen*, lxxvii
— plasma, spinal fluid, and urine, bromide administration effect, *Rossen and Reichenberg*, cvii
Determination, *Dean and Fishman*, 807
Urine, Eskimo, *Levine and Jorgensen*, lxxvii
Chlorophyll: Solutions, light absorption, *Mackinney*, 315
Cholesterol: Colloidal solution, aqueous, autoxidation, *Wintersteiner and Bergström*, cxli
Metabolism, diet effect, *Treadwell and Eckstein*, 35
—, liver autolysis, *Sperry and Brand*, cxxi
Cholic acid: Decomposition, bacterial, *Schmidt and Green*, cxi
Fate, *Hughes*, lxiv
Choline: Acetyl-, gastric ulcer production, effect, *Tashiro*, cxxxi
Biological relationships, *Stetten*, 143
Ethanolamine and, metabolism, isotopic nitrogen in study, *Stetten*, cxxvii
Gastric ulcer production, effect, *Tashiro*, cxxxi

Choline—*continued:*
Synthesis, biological, methionine methyl group, rôle, *du Vigneaud, Cohn, Chandler, Schenck, and Simmonds,* 625
Chondrosin: *Levene,* 267
Choroid plexus: Enzymes, oxidative, *Friedenwald and Herrmann,* xliii
Ciliary body: Enzymes, oxidative, *Friedenwald and Herrmann,* xliii
Cirrhosis: Liver, diet deficiency, *Lillie, Daft, and Sebrell,* cxlvi
—, protein diets, effect, *Blumberg and Grady,* xv
Citrulline: Arginine, conversion, *Borsook and Dubnoff,* xviii
Clostridium tetani: Growth requirements, *Mueller and Miller,* 933
Coagulation: *See also* Anticoagulant
Cobalt: Hemoglobin formation, protein-low diet, effect, *Orten,* c
Coenzyme: Tissue, *Handler and Dann,* 739
Creatine: -Creatinine excretion, vitamin injection effect, *Pizzolato and Beard,* cii
Excretion, intestinal, and decomposition, nephrectomy effect, *Bodansky, Duff, and McKinney,* 365
Liver, formation from glycocyamine, nephrectomy effect, *Bodansky, Duff, and McKinney,* 365
Synthesis, biological, methionine methyl group, rôle, *du Vigneaud, Cohn, Chandler, Schenck, and Simmonds,* 625
Creatinine: Creatine-, excretion, vitamin injection effect, *Pizzolato and Beard,* cii
Excretion, intestinal, and decomposition, nephrectomy effect, *Bodansky, Duff, and McKinney,* 365
Crop sac: Response, prolactin effect, *Bates and Riddle,* cxliii
Cucumber: Virus, amino acids, aromatic, *Knight and Stanley,* lxx
Cucurbit: Seed, globulins, *Vickery, Smith, Hubbell, and Nolan,* 613
—, —, amino acids, *Vickery, Smith, Hubbell, and Nolan,* 613
—, —, nutrition value, *Vickery, Smith, Hubbell, and Nolan,* 613
Cysteine: Determination, colorimetric, micro-, *Vassel,* 323
Hydrogen sulfide production, liver, *Smythe,* cxviii
Oxidation, enzyme, liver, *Medes and Floyd,* lxxxviii
Cystine: Determination, colorimetric, micro-, *Vassel,* 323
—, Vickery-White, Graff modification, *Schultz and Vars,* cxiii
Oxidation, enzyme, liver, *Medes and Floyd,* lxxxviii
Pepsin, crystalline, *Sullivan and Goldberg,* cxxix
Spermatozoa, *Zittle and O'Dell,* 899
Wool chemical constitution, rôle, *Geiger, Patterson, and Harris,* xliv
Cystinuria: *Hess and Sullivan,* lx
Cytochrome: *c,* iron determination, micro-, *Drabkin,* 387
—, spectrophotometric constants, *Drabkin,* 373
—, tumor tissue, determination, *Potter and DuBois,* cii

D

Dalmatian dog: Respiratory quotient, *Carpenter and Trimble,* xxiii
Dehydrogenase: Succinic, phenothiazone, inhibition, *Collier and Allen,* 675
Dehydroisoandrosterone: Determination, polarographic, *Hershberg, Wolfe, and Fieser,* 215

Dermatitis: Rat, related factors, *Richardson and Hogan,* cvi
Desulfurase: *Laskowski and Fromageot,* 663
Deuterium: *l*(+)-Lysine stability, study with, *Weissman and Schoenheimer,* 779
Diabetes: Blood serum sodium and potassium, juveniles, *Smelo and Shinn,* cxvii
Glucose injection, disposition, *Sayers and Orten,* cx
Diatom: Pigments, *Pace,* 483
Dibenzanthracene: Tissue vitamin A, effect, *Baumann and Foster,* xii
Diet: Bone lipids, relation, *Newlin and McCay,* xcvii
Liver cirrhosis, effect, *Lillie, Daft, and Sebrell,* cxlvi
Nitrogen retention, hyperthyroidism, effect, *Deatherage, Carothers, and Spooner,* xxxii
Dihydrotachysterol: Blood serum calcium, diffusible, hypoparathyroidism, administration, *Todd,* cxxxiii
Dihydroxymaleic acid: Oxidase, enzyme-substrate compounds, kinetics, *Chance,* xxiv
Diiodotyrosine: Blood plasma, turnover, thyrotropic hormone effect, radioactive iodine as indicator, *Morton, Perlman, and Chaikoff,* 603
Thyroid, turnover, thyrotropic hormone injection effect, radioactive iodine as indicator, *Morton, Perlman, and Chaikoff,* 603
Dimethyl-β-methylglucoside: 2,4-, synthesis, *Adams, Reeves, and Goebel,* 653
Diphosphothiamine: Functions, *Barron, Lyman, Lipton, and Goldinger,* xi
Drosophila: v^+ hormone, identification, *Tatum and Haagen-Smit,* 575

E

Egg: Proteins, carbohydrate group, *Levene,* 279
Egg albumin: Precipitation, alcohol and acetone effect, *Hendrix, Calvin, and Walker,* lviii
Egg white: Protein, injury-producing, concentration and assay, *Eakin, Snell, and Williams,* 535
Electrolyte(s): Heart, hypertrophying, *Hitchings and Wearn,* lxi
Muscle, skeletal, available fluid, and blood plasma, exchange, dehydration, *Mellors, Muntwyler, and Mautz,* lxxxix
—, —, hydronephrosis, potassium salts, injection effect, *Eichelberger,* xxxv, 467
Embryo: Chick, nicotinic acid synthesis, *Dann and Handler,* 935
Opossum, blood cells, red, size, liver extract effect, *Hays and Last,* lv
Energy: Output, *Beard,* cxliv
Enzyme(s): Blood serum, pneumococcus-infected dogs, effect, *Crossley, Kienle, Vassel, and Christopher,* xxxi
Cystine and cysteine oxidation, liver, *Medes and Floyd,* lxxxviii
Glucose-6-phosphate conversion to glycogen, *Sutherland, Colowick, and Cori,* 309
Oxidative, ciliary body and chorioid plexus, *Friedenwald and Herrmann,* xliii
Pasteur, yeast respiratory ferment, relation, *Melnick,* xc
Roentgen rays, effect, *Boyd, Kersten, and Tytell,* xix

Enzyme(s)—*continued:*
See also Anhydrase, Carboxylase, Dehydrogenase, Desulfurase, Ficin, Hexokinase, Hyaluronidase, Invertase, Oxidase, Pepsin, Peroxidase, Phosphorylase, Succinoxidase, Urease
Erythrocyte(s): *See* Blood cell, red
Eskimo: Blood and urine chlorides, *Levine and Jorgensen,* lxxvii
Estradiol: α-, estrone, conversion, *Fish and Dorfman,* 83
—, metabolism, *Fish and Dorfman,* xl
Estrone, conversion, *Heard and Hoffman,* lv
Estrogen(s): Assay, mouse uterine weight, *Evans and Varney,* xxxviii
Estrone: α-Estradiol conversion, *Fish and Dorfman,* 83
Estradiol conversion, *Heard and Hoffman,* lv
Metabolism, *Fish and Dorfman,* xl
Oxidation, hydrogen peroxide, *Westerfeld,* cxxxviii
Thyroid, effect, *Gustavson, Koenig, and Gassner,* xlix
Ethanolamine: Biological relationships, *Stetten,* 143
Choline and, metabolism, isotopic nitrogen in study, *Stetten,* cxxvii
Ether: Vapor, anesthetic concentration, *Harger, Hulpieu, Gatch, and Forney,* lii
Exercise: Capacity, adolescents, *Morse, Schlutz, Cassels, Bucklin, and Miller,* xciv
Extracellular fluid: *Brodie, Friedman, and Ferraro,* xxi
Eye: Tryptophane-deficient diet effect, *Totter and Day,* cxxxiv

F

Fasting: Blood serum magnesium and phosphatase, effect, *Snyder and Tweedy,* cxx
Lipids, *Hodge, MacLachlan, Bloor, Stoneburg, Oleson, and Whitehead,* lxii
Liver protein, *Schultz and Vars,* cxii
Fat(s): Absorption, adrenals and, *Barnes, Miller, and Burr,* 241
—, fatty acids, essential, deficiency, *Barnes, Miller, and Burr,* 773
Feces, variation, extraction methods, effect, *Kaye, Kraus, Leibner, and Sobel,* lxvii
-High diet, cholesterol metabolism, effect, *Treadwell and Eckstein,* 35
Liver, calcium pantothenate and vitamin B factors, effect, *Engel,* xxxvii
— transport, adrenals, effect, *Barnes, Miller, and Burr,* 247
-Low diet, cholesterol metabolism, effect, *Treadwell and Eckstein,* 35
— ration, carotene and vitamin A absorption and retention, *Russell, Taylor, Walker, and Polskin,* cix
Metabolism, carbon tetrachloride poisoning, relation, *Forbes, Leach, and Outhouse,* xli
Fatty acid(s): Absorption, intestinal mucosa, *Barnes, Miller, and Burr,* 233
—, portal, *Winter and Crandall,* 97
Essential, deficiency, fat absorption, *Barnes, Miller, and Burr,* 773
Transport, intestinal mucosa, *Barnes, Miller, and Burr,* 233
Unsaturated, hemin and hemoglobin destruction, *Haurowitz, Schwerin, and Yenson,* 353

Feces: Fat variation, extraction methods, effect, *Kaye, Kraus, Leibner, and Sobel,* lxvii
Feed: Utilization, grinding effect, *Heller, Wall, and Briggs,* lvii
Fermentation: Biotin rôle, *Burk, Winzler, and du Vigneaud,* xxi
Ficin: Anthelmintic, *Andrews and Cornatzer,* iv
Fish: Anemia factor, *Simmons and Norris,* 679
See also Jellyfish
Fluorinated compound(s): Organic, basal metabolism, effect, *Boyer, Evans, and Phillips,* xx
—, toxicity, *Boyer, Evans, and Phillips,* xx
Fluorine: Biological materials, determination, *Armstrong,* v
Dental caries, effect, *McClendon and Foster,* lxxxv
Phosphorus metabolism, rickets, effect, *Morgareidge, Alling, and Ellison,* xciii
Fusarium lini: Dehydrogenation mechanism, *Goepfert,* 525

G

Galactose: Tolerance, *Hill and Koehler,* lxi
Gastric: *See* Stomach
Globulin(s): Cucurbit seed, *Vickery, Smith, Hubbell, and Nolan,* 613
— —, amino acids, *Vickery, Smith, Hubbell, and Nolan,* 613
— —, nutrition value, *Vickery, Smith, Hubbell, and Nolan,* 613
Glucose: Absorption, temperature effect, *Rafferty and Mac Lachlan,* 167
Blood pyruvate, thiamine deficiency, ingestion effect, *Bueding, Stein, and Wortis,* 697
— sugar, temperature effect, *Rafferty and Mac Lachlan,* 167
Glucose—*continued:*
Diabetes, injection, disposition, *Sayers and Orten,* cx
Liver glycogen, temperature effect, *Rafferty and Mac Lachlan,* 167
Glucose - 6 - phosphate: Glycogen, conversion, enzymatic, *Sutherland, Colowick, and Cori,* 309
Glucoside: 2,4-Dimethyl-β-methyl-, synthesis, *Adams, Reeves, and Goebel,* 653
Glutamic acid: Hydroxy-, milk proteins, *Nicolet and Shinn,* xcviii
Glutaric: α-Keto-, carboxylase, tissue, *Green, Westerfeld, Vennesland, and Knox,* 683
Glutathione: Aspartic acid analogue, synthesis, *Miller, Behrens, and du Vigneaud,* 411
Glyceraldehyde(s): Acetone-, *Baer and Fischer,* 397
Optically active, *Baer and Fischer,* 397
Glycerides: Optically active, *Baer and Fischer,* 397
Glycine: Nutrition, chick, rôle, *Hegsted, Briggs, Elvehjem, and Hart,* 191
Glycocyamine: Liver creatine formation from, nephrectomy effect, *Bodansky, Duff, and McKinney,* 365
Metabolism, nephrectomy effect, *Bodansky and Duff,* xvi
Glycogen: Glucose-6-phosphate conversion, enzymatic, *Sutherland, Colowick, and Cori,* 309
Liver, temperature effect, glucose and starch administration, *Rafferty and Mac Lachlan,* 167
Glyconeogenesis: Kidney, adrenalectomy effect, *Russell and Wilhelmi,* 747
Gold: Body, fate, *Block and Buchanan,* xiv

Gonadotropic activity: Hypophyses, changes, *Beach and Koch*, xiii
Grinding: Feed utilization, effect, *Heller, Wall, and Briggs*, lvii
Growth: Brain lipids, deposition and metabolism, effect, *Waelsch, Sperry, and Stoyanoff*, 885
Factor, *Lactobacillus casei*, chick nutrition, relation, *Hutchings, Bohonos, Hegsted, Elvehjem, and Peterson*, 681
—, — —, identification, *Feeney and Strong*, xxxviii
Streptococcus, blood, sulfathiazole effect, *Hamilton and Wasson*, p. 1

H

Heart: Electrolytes, hypertrophy effect, *Hitchings and Wearn*, lxi
Hemicellulose(s): Polyuronide, white pine, *Anderson, Kesselman, and Bennett*, 563
Hemin: Derivatives, spectrophotometric constants, *Drabkin*, 373
Destruction, fatty acids, unsaturated, and oxygen, effect, *Haurowitz, Schwerin, and Yenson*, 353
Iron determination, micro-, *Drabkin*, 387
Hemoglobin: Destruction, fatty acids, unsaturated, and oxygen, effect, *Haurowitz, Schwerin, and Yenson*, 353
Formation, protein-low diet, cobalt effect, *Orten*, c
Met-, reduction, ascorbic acid, *Vestling*, cxxxv
Methemoglobin reversion rate, *Cox and Wendel*, xxxi
Hemorrhage: Vitamin K, prenatal administration, effect, *Mull, Bill, and Skowronska*, xcv
Heptanoic acid: 2-Methyl-, 4-methylnonanoic acid, configurational relationship, *Levene and Kuna*, 255
Hexokinase: Protein, heat-stable, activating, preparation, *Colowick and Kalckar*, xxix
Hexylresorcinol: Catalyzed reactions, effect, *Horwitt and Simon*, lxiii
Histamine: Carbonic anhydrase activation, *Main and Locke*, lxxxi
Hyaluronidase(s): Animal and bacterial, *Meyer and Chaffee*, xci
Hydrocarbon(s): Tumor production, *Shear and Leiter*, cxv
Hydrogen sulfide: Cysteine, production, liver, *Smythe*, cxviii
Hydronephrosis: Muscle water and electrolytes, effect, *Eichelberger*, xxxv, 467
Hydroxyamino acid(s): O-Acetyl derivatives, preparation, *Toennies, Sakami, and Kolb*, cxxxiii
Methylation, betaine formation, *Dakin*, 847
Hydroxy-γ-benzylthiobutyric acid: *dl*-α-, metabolism, *Stekol*, 827
Hydroxy-β-benzylthiopropionic acid: *dl*-α-, metabolism, *Stekol*, 827
l-α-, metabolism, *Stekol*, 827
Hydroxybutyric acid: β-, concentration and utilization rate, relation, *Nelson, Grayman, and Mirsky*, 361
Hydroxyglutamic acid: Milk proteins, *Nicolet and Shinn*, xcviii
Hydroxy group(s): Amino acids, determination, *Toennies, Sakami, and Kolb*, cxxxiii
Hydroxynicotinic acid: 2-, oxidation, liver, *Bernheim*, xiv
Hydroxy steroid(s): Esters, colored, *Coffman*, xxviii
Hydroxy-Δ^5-steroid(s): 3-, determination, polarographic, *Hershberg, Wolfe, and Fieser*, 215

Hydroxy-γ-thiobutyric acid: *dl-α-*, S-benzyl derivatives, metabolism, *Stekol*, cxxv
Hyperthyroidism: Nitrogen retention, diet effect, *Deatherage, Carothers, and Spooner*, xxxii
Hypervitaminosis: D_2 and D_3, vitamin A effect, *Morgan, Hendricks, and Freytag*, xcii
Hypoparathyroidism: Blood serum calcium, diffusible, parathormone, dihydrotachysterol, and vitamin D administration, *Todd*, cxxxiii
Hypophysis: Blood serum protein metabolism, effect, *Levin and Leathem*, lxxvi
Gonadotropic activity, changes, *Beach and Koch*, xiii

I

Indole: Brain oxidation, effect, *Stotz and Hutchinson*, cxxvii
Infectious disease(s): Chemistry, *Crossley, Kienle, Vassel, and Christopher*, xxxi
Inositol: Determination, *Woolley*, 453
Specificity, biological, *Woolley*, 461
Insulin: Electrophoresis, *Hall*, 671
Interstitial cell-stimulating hormone: Biochemistry, *Chow, van Dyke, Greep, Rothen, and Shedlovsky*, xxvi
Intestine: Mucosa, fatty acid absorption and transport, *Barnes, Miller, and Burr*, 233
Invertase: Purification, bentonite use, *Adams and Hudson*, iii
Iodine: Blood, *Man, Lavietes, and Riggs*, lxxxii
Cerebrospinal fluid, *Man, Lavietes, and Riggs*, lxxxii
Metabolism, radioactive iodine as indicator, *Morton, Perlman, and Chaikoff*, 603
Iodine—*continued:*
Radioactive, iodine metabolism indicator, *Morton, Perlman, and Chaikoff*, 603
—, thyroxine and diiodotyrosine turnover, thyroid and blood plasma, thyrotropic hormone effect, indicator for, *Morton, Perlman, and Chaikoff*, 603
Ultrafiltrates, *Man, Lavietes, and Riggs*, lxxxii
Iodoacetic acid: Poisoning, phospholipids, *Sinclair*, cxvi
Ion(s): Blood-cerebrospinal fluid permeability, radioactive isotopes in study, *Greenberg, Aird, Boelter, Campbell, Cohn, and Murayama*, xlviii
Stomach wall, transfer, radioactive isotopes in study, *Eisenman, Smith, Winkler, and Elkinton*, xxxv
Iron: Cytochrome *c*, determination, micro-, *Drabkin*, 387
Hemin, determination, micro-, *Drabkin*, 387
Muscle, heat effect, *Oldham and Schlutz*, xcix
Isotope(s): Radioactive, blood-cerebrospinal fluid permeability, ions, study by, *Greenberg, Aird, Boelter, Campbell, Cohn, and Murayama*, xlviii
—, ion transfer, stomach wall, study by, *Eisenman, Smith, Winkler, and Elkinton*, xxxv
—, selenium excretion, respiratory, *McConnell*, lxxxv

J

Jellyfish: Proteins, extraction, *Ferry*, xxxix

K

Keto acid(s): Biological material, determination, *Sealock and Scherp*, cxiv
Excretion, *Waelsch*, 313

Ketoglutaric carboxylase: α-, tissue, *Green, Westerfeld, Vennesland, and Knox*, 683
Ketone: α,β-Unsaturated, adrenal, isolation, *Pfiffner and North*, 161
Ketone body: Determination, micro-, *Weichselbaum and Somogyi*, 5
Ketonuria: Endogenous, *Deuel and Hallman*, 545
Ketosis: *Deuel and Hallman*, 545
Ketosteroid(s): Carbonyl groups, determination, gravimetric, *Hughes*, 21
Kidney: Calculi, phosphatic, solubility, *McCullagh, Throckmorton, and Higgins*, lxxxvi
Glyconeogenesis, adrenalectomy effect, *Russell and Wilhelmi*, 747
See also Hydronephrosis, Nephrectomy

L

Lactation: Essential factor, *Sure*, cxxx
Lactic acid: Bacteria, growth, manganese relation, *Woolley*, 311
Fermentation, abnormal products, substrate influence, *Johnson, Koepsell, and Fontaine*, lxvi
l-Thio-, S-benzyl derivatives, metabolism, *Stekol*, cxxv
Lactobacillus casei: Growth factor, chick nutrition, relation, *Hutchings, Bohonos, Hegsted, Elvehjem, and Peterson*, 681
Growth-stimulating substances, identification, *Feeney and Strong*, xxxviii
Lactogenic hormone: Pituitary, *Li, Lyons, and Evans*, 43
—, molecular weight, *Li, Lyons, and Evans*, 43
Lanthionine: Stereoisomeric forms, *Brown and du Vigneaud*, 767
Lead: Blood and bone, calcium, phosphorus, and vitamin D effect, *Sobel, Yuska, and Kramer*, cxx
Poisoning, protein intake effect, *Baernstein, Grand, and Neal*, viii
Lead acetate: Liver oxygen uptake, effect, *Baernstein and Grand*, 285
Light: Absorption, chlorophyll solutions, *Mackinney*, 315
Linoleic acid: Acrodynia, effect, *Salmon*, cix
Linoleic ester: Carotene stabilization, *Quackenbush, Cox, and Steenbock*, civ
Lipid(s): Blood plasma, distribution and characterization, *Kelsey and Longenecker*, lxix
Body, sex differences, *Loeb and Burr*, lxxx
Bone, diet relation, *Newlin and McCay*, xcvii
Brain, deposition, growth and myelination effect, *Waelsch, Sperry, and Stoyanoff*, 885

—, —, young, *Waelsch and Sperry*, cxxxvii
—, partition, *Williams, Kaucher, Galbraith, Segaloff, and Nelson*, cxl
—, proteins, relationship, *Kondritzer*, lxxi
Denaturation, x-ray studies, *Spiegel-Adolf and Henny*, cxxiii
Fasting, *Hodge, MacLachlan, Bloor, Stoneburg, Oleson, and Whitehead*, lxii
Liver, ultraviolet absorption spectrum, *Barnes, Miller, Rusoff, Loeb, and Burr*, x

Lipid(s)—*continued:*
Spermatozoa, *Zittle and O'Dell*, 899
Synthesis, biotin effect, *McHenry and Gavin*, lxxxvii
Tubercle bacillus, chemistry, *Peck and Anderson*, 89
— —, derivatives, x-ray studies, *Spiegel-Adolf and Henny*, cxxii
Lipotropic action: Sulfur-containing amino acids, *Singal and Eckstein*, 27
Liver: Autolysis, cholesterol metabolism, *Sperry and Brand*, cxxi
Biotin, isolation, *du Vigneaud, Hofmann, Melville, and György*, 643
Cirrhosis, diet deficiency, *Lillie, Daft, and Sebrell*, cxlvi
—, protein diets, effect, *Blumberg and Grady*, xv
Creatine formation from glycocyamine, nephrectomy effect, *Bodansky, Duff, and McKinney*, 365
Cysteine, hydrogen sulfide production, *Smythe*, cxviii
Cystine and cysteine oxidation, enzyme, *Medes and Floyd*, lxxxviii
Disease, blood serum protein determinations, *Kingsley*, lxix
Extract, blood cells, red, size, opossum embryo, effect, *Hays and Last*, lv
Fat, calcium pantothenate and vitamin B factors, effect, *Engel*, xxxvii
— transport, adrenals, effect, *Barnes, Miller, and Burr*, 247
Glycogen, temperature effect, glucose and starch administration, *Rafferty and MacLachlan*, 167
2-Hydroxynicotinic acid oxidation, *Bernheim*, xiv
Liver—*continued:*
Lipids, ultraviolet absorption spectrum, *Barnes, Miller, Rusoff, Loeb, and Burr*, x
Nucleoprotein, fasting, *Schultz and Vars*, cxii
Oxygen uptake, lead acetate effect, *Baernstein and Grand*, 285, vii
Protein, fasting, *Schultz and Vars*, cxii
Proteins, electrophoresis, *Luck, Nimmo, and Alvarez-Tostado*, lxxxi
Xanthine oxidase, riboflavin effect, *Axelrod and Elvehjem*, vi, 725
Lung: Protein, thromboplastic, electrophoresis, *Cohen and Chargaff*, 689
—, —, phospholipids, *Cohen*, xxix
Lysine: *dl-*, metabolism, *Butts and Sinnhuber*, 597
l(+)-, isolation, *Kurtz*, 705
—, stability, deuterium and heavy nitrogen in study, *Weissman and Schoenheimer*, 779

M

Magnesium: Blood serum, magnesium-deficient diet and fasting, effect, *Snyder and Tweedy*, cxx
-Deficient diet, blood serum magnesium and phosphatase, effect, *Snyder and Tweedy*, cxx
Malaria: Parasites, metabolism, *Wendel*, cxxxviii
Maleic acid: Dihydroxy-, oxidase, enzyme-substrate compounds, kinetics, *Chance*, xxiv

S

Saliva: Group-specific substances, *Landsteiner and Harte,* 673
Salt(s): Thymonucleic acid, action, *Greenstein and Jenrette,* xlix
Sarcoma: Carcino-, sphingomyelin turnover, radioactive phosphorus in study, *Haven and Levy,* cxlv
Walker, supracorsin and vitamins, effect, *Beard and Coutolenc,* xiii
Selachyl alcohol: Natural, configuration, *Baer and Fischer,* 397
Selenium: Respiratory excretion, radioactive isotope in study, *McConnell,* lxxxv
Urine, *Sterner and Lidfeldt,* cxxvi
Serine: Brain phosphatides, isolation, *Chargaff and Ziff,* 927
Peptide combination, lability to alkali, *Nicolet and Shinn,* 685
Serological reaction(s): Heat, *Boyd,* xix
Sex: Body lipids, differences, *Loeb and Burr,* lxxx
Silicomolybdic acid: Ascorbic acid, reduction, *Levine and Rosler,* lxxviii
Silk oak: Flowers, β-carotene source, *Zechmeister and Polgár,* l
Sodium: Blood cell, red, permeability, *Kurnick,* 581
— serum, diabetes, juveniles, *Smelo and Shinn,* cxvii
Determination, phosphate presence, *Sobel, Kraus, and Kramer,* 501
Specific gravity: Blood serum albumin determination, *Barbour,* x
— — base, total, determination, *Sunderman,* cxxix
Spectrophotometry: *Drabkin,* 373, 387
Spermatozoa: Cystine, *Zittle and O'Dell,* 899
Lipids, *Zittle and O'Dell,* 899
Motility, phospholipid effect, *Lardy and Phillips,* lxxiv
Nitrogen, *Zittle and O'Dell,* 899
Nucleic acid, *Zittle and O'Dell,* 899
Phosphorus, *Zittle and O'Dell,* 899
Sulfur, *Zittle and O'Dell,* 899
Sphingomyelin: Turnover, carcinosarcoma, radioactive phosphorus in study, *Haven and Levy,* cxlv
Starch: Absorption, temperature effect, *Rafferty and MacLachlan,* 167
Blood sugar, temperature effect, *Rafferty and MacLachlan,* 167
Liver glycogen, temperature effect, *Rafferty and MacLachlan,* 167

Starch – *continued:*
Phosphorylase, *Green and Stumpf*, xlvii
Steroid(s): Hormones, determination, colorimetric, *Mather*, lxxxiv
—, metabolism, *Fish and Dorfman*, 83
3-Hydroxy-Δ^5-, determination, polarographic, *Hershberg, Wolfe, and Fieser*, 215
Hydroxy, esters, colored, *Coffman*, xxviii
Keto-, carbonyl groups, determination, gravimetric, *Hughes*, 21
Sterol(s): Metabolism, *Treadwell and Eckstein*, 35
Stilbestrol: Blood plasma phospholipids, effect, *Flock and Bollman*, xl
Thyroid, effect, *Gustavson, Koenig, and Gassner*, xlix
Stomach: Mucus secretion, *Hollander and Felberg*, lxii
Ulcer, choline and acetylcholine, effect, *Tashiro*, cxxxi
Wall, ion transfer, radioactive isotopes in study, *Eisenman, Smith, Winkler, and Elkinton*, xxxv
Streptococcus: Blood, growth, sulfathiazole effect, *Hamilton and Wasson*, p. 1
Nucleoprotein, conjugation, *Sevag and Smolens*, 833
Streptococcus bovis: Polysaccharide synthesis, *Niven, Smiley, and Sherman*, 105
Streptococcus salivarius: Polysaccharide synthesis, *Niven, Smiley, and Sherman*, 105
Succinic dehydrogenase: Phenothiazone, inhibition, *Collier and Allen*, 675
Succinoxidase: Tissue, calcium effect, *Axelrod, Swingle, and Elvehjem*, 931
Sugar(s): Blood. *See* Blood sugar
Oxidation, brain, *Bernheim and Bernheim*, 441
Sulfanilamide: Acid-base equilibrium, effect, *Free, Bowman, Davies, and Myers*, xlii
Action, chemical compounds, effect, *Raiziss, Severac, and Moetsch*, cv
Sulfapyridine: Action, chemical compounds, effect, *Raiziss, Severac, and Moetsch*, cv
—, mechanism, *Dorfman, Rice, and Koser*, xxxiii
Conjugation, quinine and atabrine effect, *Harned and Cole*, liii
Sulfathiazole: Streptococcus growth, blood, effect, *Hamilton and Wasson*, p. 1
Sulfhydryl group(s): Protein, urease inactivation, relation, *Hellerman, Deitz, and Chinard*, lvii
Sulfur: -Containing amino acids, lipotropic action, *Singal and Eckstein*, 27
Spermatozoa, *Zittle and O'Dell*, 899
Supracorsin: Sarcoma, Walker, vitamins and, effect, *Beard and Coutolenc*, xiii

T

Temperature: Environmental, blood sugar, liver glycogen, and absorption, glucose and starch administration, effect, *Rafferty and MacLachlan*, 167
Testosterone: Determination, colorimetric, *Koenig, Szego, and Samuels*, lxxi

Thiamine: Clearance, nutrition, *Melnick and Field,* xc
Combined, milk, *Halliday and Deuel,* 555
Deficiency, blood pyruvate, glucose ingestion effect, *Bueding, Stein, and Wortis,* 697
—, nitrogen metabolism, *Sure and Ford,* cxxx
Diphospho-, functions, *Barron, Lyman, Lipton, and Goldinger,* xi
Excretion, *Smith, Otis, and Spector,* cxviii
Free, milk, *Halliday and Deuel,* 555
Urine, determination, thiochrome method, nicotinic acid ingestion effect, *Mason and Williams,* 417
Thiocyanate: Biological fluids, determination, *Chesley,* 135
Thiolactic acid: *l*-, S-benzyl derivatives, metabolism, *Stekol,* cxxv
Threonine: Peptide combination, lability to alkali, *Nicolet and Shinn,* 685
Thrombin: Meta-, blood, circulating, *Quick,* cxlvi
Pro-, purification, *Seegers and Smith,* 677
Thromboplastic protein: Lung, electrophoresis, *Cohen and Chargaff,* 689
—, phospholipids, *Cohen,* xxix
Thymonucleic acid: Proteins, salts, and tissue extracts, interaction, *Greenstein and Jenrette,* xlix
Thyroid: Blood calcium and inorganic phosphate, administration effect, *Logan, Christensen, and Kirklin,* lxxx
Bromine and, *Baumann, Sprinson, and Marine,* xii
Diiodotyrosine turnover, thyrotropic hormone effect, radioactive iodine as indicator, *Morton, Perlman, and Chaikoff,* 603
Thyroid—*continued:*
Disease, dietary protein relation, *Marron and Weingart,* lxxxiii
Estrone effect, *Gustavson, Koenig, and Gassner,* xlix
Stilbestrol, effect, *Gustavson, Koenig, and Gassner,* xlix
Thyroxine turnover, thyrotropic hormone effect, radioactive iodine as indicator, *Morton, Perlman, and Chaikoff,* 603
Urine calcium and inorganic phosphate, administration effect, *Logan, Christensen, and Kirklin,* lxxx
Thyrotropic hormone: Blood plasma thyroxine and diiodotyrosine turnover, effect, radioactive iodine as indicator, *Morton, Perlman, and Chaikoff,* 603
Pituitary, anterior, purification, *White and Ciereszko,* cxxxix
Thyroid thyroxine and diiodotyrosine turnover, effect, radioactive iodine as indicator, *Morton, Perlman, and Chaikoff,* 603
Thyroxine: Blood plasma, turnover, thyrotropic hormone effect, radioactive iodine as indicator, *Morton, Perlman, and Chaikoff,* 603
Thyroid, turnover, thyrotropic hormone effect, radioactive iodine as indicator, *Morton, Perlman, and Chaikoff,* 603
Tissue: Extracts, thymonucleic acid, action, *Greenstein and Jenrette,* xlix
Transamination, *Cohen and Hekhuis,* xxviii, 711
Tobacco: Mosaic virus, amino acids, aromatic, *Knight and Stanley,* lxx
— —, antiserum and, reaction, electron microscope study, *Anderson and Stanley,* iii

Tobacco—*continued:*
Mosaic virus, denaturation, *Laufer and Dow,* 509
Tooth: Caries, fluorine effect, *McClendon and Foster,* lxxxv
Potassium, spectrochemistry, *Steadman, Hodge, and Horn,* 71
Transamination: Tissues, *Cohen and Hekhuis,* 711
Tryptophane: Deficiency, cataract and ocular changes, *Totter and Day,* cxxxiv
Tubercle bacillus: Lipids, chemistry, *Peck and Anderson,* 89
—, derivatives, x-ray studies, *Spiegel-Adolf and Henny,* cxxii
Phleimycolic acid, *Peck and Anderson,* 89
Tuberculin: Nucleic acid isolation, electrophoretic, *Seibert and Watson,* 55
Polysaccharides, isolation, electrophoretic, *Seibert and Watson,* 55
Tumor(s): Cytochrome *c* determination, *Potter and DuBois,* cii
Production, hydrocarbons, *Shear and Leiter,* cxv
Tissue, transamination, *Cohen and Hekhuis,* xxviii
See also Cancer, Sarcoma
Tyrosine: Diiodo-, blood plasma, turnover, thyrotropic hormone effect, radioactive iodine as indicator, *Morton, Perlman, and Chaikoff,* 603
—, thyroid, turnover, thyrotropic hormone effect, radioactive iodine as indicator, *Morton, Perlman, and Chaikoff,* 603
l(−)-, metabolism, *Butts, Sinnhuber, and Dunn,* xxii
—, reducing action, factors affecting, *Bowman,* xviii
Metabolism, ascorbic acid rôle, *Sealock, Perkinson, and Basinski,* 153

U

Urea: Nitrogen, determination, micro-, *Bock,* xv, 519
Urease: Inactivation, protein sulfhydryl groups, relation, *Hellerman, Deitz, and Chinard,* lvii
Recrystallization, *Dounce,* 307
Uric acid: Blood plasma, determination, *Bulger and Johns,* 427
Urine: Bromide and chloride, bromide administration effect, *Rossen and Reichenberg,* cvii
Calcium, thyroid and parathyroid administration effect, *Logan, Christensen, and Kirklin,* lxxx
Chlorides, Eskimo, *Levine and Jorgensen,* lxxvii
Fluorescent substances, pellagra, *Najjar and Holt,* xcvi
Morphine derivatives, excretion form, chemical constitution, relation, *Oberst,* xcviii
Phosphate, inorganic, thyroid and parathyroid administration effect, *Logan, Christensen, and Kirklin,* lxxx
Pregnancy, androstanol-3(β)-one, chemical constitution, *Heard and McKay,* lvi
Protein, determination, micro-, *Price,* civ
Quinine determination, photelometric, *Kyker and Webb,* lxxiii
Selenium, *Sterner and Lidfeldt,* cxxvi
Thiamine determination, thiochrome method, nicotinic acid ingestion effect, *Mason and Williams,* 417
— excretion, *Smith, Otis, and Spector,* cxviii
Uterus: Weight, estrogen assay, *Evans and Varney,* xxxviii

V

Vegetable(s): Calcium, dry milk solids and, utilization, *Shields and Mitchell,* cxv

Virus: Cucumber, amino acids, aromatic, *Knight and Stanley,* lxx

Papilloma protein, molecular size, shape, and homogeneity, *Neurath, Cooper, Sharp, Taylor, Beard, and Beard,* 293

Tobacco mosaic, amino acids, aromatic, *Knight and Stanley,* lxx

— —, antiserum and, reaction, electron microscope study, *Anderson and Stanley,* iii

— —, denaturation, *Lauffer and Dow,* 509

Vitamin(s): A, absorption and retention, normal and low fat rations, *Russell, Taylor, Walker, and Polskin,* cix

A-free diets, vitamin deficiency other than vitamin A, *Hartman, Dryden, and Cary,* liv

A, hypervitaminosis D_2 and D_3, effect, *Morgan, Hendricks, and Freytag,* xcii

—, storage, adults, *Booher and Porter,* xvi

—, tissue, dibenzanthracene effect, *Baumann and Foster,* xii

A_1-related substance, *Embree and Shantz,* xxxvii

A_2-related substance, *Embree and Shantz,* xxxvii

B factors, liver fat, effect, *Engel,* xxxvii

B_1, carbohydrate metabolism, effect, *Pincussen,* ci

C, deficiency, barbiturates, effect, *Kueter, Richards, and Klatt,* lxxii

—. *See also* Ascorbic acid

Creatine-creatinine excretion, injection effect, *Pizzolato and Beard,* cii

D, blood and bone lead, effect, *Sobel, Yuska, and Kramer,* cxx

—, — serum calcium, diffusible, hypoparathyroidism, administration, *Todd,* cxxxiii

—, carbohydrate metabolism, effect, *Pincussen,* ci

—, storage and excretion, *Remp,* cv

H, liver, isolation, *du Vigneaud, Hofmann, Melville, and György,* 643

—. *See also* Biotin

K, prenatal administration, hemorrhage, effect, *Mull, Bill, and Skowronska,* xcv

Supracorsin and, Walker sarcoma, effect, *Beard and Coutolenc,* xiii

See also Hypervitaminosis

W

Water: Muscle, skeletal, available fluid, and blood plasma, exchange, dehydration, *Mellors, Muntwyler, and Mautz,* lxxxix

—, —, hydronephrosis, potassium salts, injection effect, *Eichelberger,* xxxv, 467

Wheat: Indian, mucilage, *Anderson, Gillette, and Seeley,* 569

Wool: Chemical constitution, cystine rôle, *Geiger, Patterson, and Harris,* xliv

Powdered, nutritional properties, *Routh,* cviii

Protein, acids, combination, *Steinhardt,* cxxiv

Work: *See also* Energy, Exercise

X

Xanthine: Oxidase, liver, riboflavin effect, *Axelrod and Elvehjem*, vi, 725

Xanthopterin: Anemia factor, fish, *Simmons and Norris*, 679

X-ray: *See* Roentgen ray

Y

Yeast: *p*-Aminobenzoic acid isolation, *Blanchard*, 919

Ferment, respiratory, Pasteur enzyme, relation, *Melnick*, xc

Respiration, low oxygen tension, *Winzler*, cxlii
